

About the Role

- We're looking for a DevOps Lead to drive cloud architecture, reliability, and platform engineering initiatives for our SaaS ecosystem. This is a hands-on leadership role where you'll guide infrastructure strategy, improve operational maturity, and mentor a growing DevOps team.
- You'll help shape scalable, secure, and cost-efficient cloud environments while enabling engineering teams to move fast and safely.

What You'll Drive

- Own cloud architecture on GCP (preferred) or AWS
- Define standards for:
- Load Balancers
- Cloud DNS / Route 53
- CDN
- VPC design, subnetting, routing, firewall policies
- Architect and oversee Kubernetes environments (GKE/EKS)
- Lead Infrastructure as Code strategy using Terraform (mandatory)
- Improve deployment pipelines and release automation
- Drive reliability engineering practices (SLOs, monitoring, incident response)
- Strengthen cloud security posture and IAM governance
- Improve infrastructure cost visibility and optimization
- Mentor DevOps engineers and promote engineering best practices
- Collaborate with engineering, product, and security leadership

What We're Looking For

- 8+ years of DevOps / Cloud experience
- Proven experience architecting production-grade SaaS environments
- Deep understanding of cloud networking and distributed systems
- Strong Kubernetes architecture and operations experience
- Advanced Terraform expertise (modular, scalable infrastructure design)
- Strong knowledge of cloud security, IAM, and governance
- Experience leading incident management and reliability initiatives
- Ability to balance scalability, cost, and performance

Nice to Have

- GCP certification (Professional Cloud Architect / DevOps Engineer)
- Experience building internal developer platforms
- Exposure to multi-cloud strategies
- Experience supporting MLOps platforms or AI workloads
