

Still ugly list:

- It feels very plain and simple
- No animations, no gsap used and very minimal JS used so website feels boring
- Color theme looks like flyrank so I'll change that so it looks unique
- Github href for projects is missing
- Text content for almost all the sections needs to be changed. It is too basic and definitely doesn't help in leading a client in the way that i desire.

Friends reaction on the portfolio website (it was expected)
