

These are the before pictures. My photo was getting squished towards the right while I wanted it to render below my description. Also my description should have been in the center but it is left aligned right now. So there were a lot of responsiveness errors that were out there. So I had helped it fix with the help of Gemini

Portfolio Development Fix Log

1. Interactive Card Enhancements

Iteration 1

- **Problem:** Card layouts used heavy borders on hover, causing layout shifting (jerkiness) as elements expanded. Shadows lacked presence on top boundaries.
- **Fix:** Replaced hard borders with a hardware-accelerated fluid structure using `box-shadow`.
- **Code Added:** `box-shadow: 0 0px 60px 5px rgba(87, 217, 139, 0.25);`

2. Smooth Scroll & Kinetics Integration

Iteration 2

- **Problem:** Standard browser scrolling felt generic. Needed luxury, heavy, controlled scrolling physics.

- **Fix:** Integrated the **Locomotive Scroll V5** core library engine via CDN. Removed conflicting native `scroll-behavior: smooth` configurations to eliminate render stuttering. Custom-tuned deceleration settings (`lerp: 0.07`, `duration: 1.5`).

3. Typography Styling System

Iteration 3

- **Problem:** Text elements lacked creative hierarchy and contrast against the dark background.
- **Fix:** Imported dynamic font weights for **Inter** and injected an elegant editorial serif highlight style using **Cormorant Garamond** on designated heading accents (`h1 span`).

4. Mobile Viewport Architecture (Responsiveness)

Iteration 4

- **Problem:** Double-column grid system collapsed columns on smaller screen bounds, squishing the profile image and throwing structural sections off-center.
- **Fix:** Authored a comprehensive `@media (max-width: 768px)` breaking layout. Collapsed hero grids down to `1fr` vertical stacks, centered elements globally, bounded maximum vector limits (`max-width: 360px`), and updated standard images to follow an intrinsic `height: auto` configuration.

Hi, I'm *Vatsal*.

I build modern, responsive websites that are fast, clean, and easy to use. Whether you're a startup, student organization, or

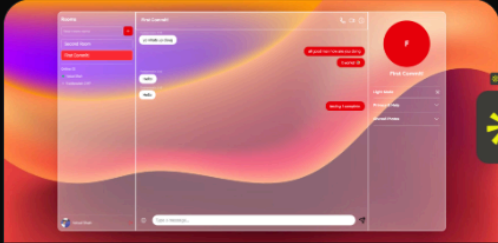

local business, I focus on creating websites that not only look good but also help people trust your brand and take action. I care about clear communication, attention to detail, and delivering work that's built to last.
